DETAILED ACTION

Election/Restrictions

Newly submitted claims 21-26 are directed to an invention that is independent or distinct from the invention originally claimed for the following reasons: The newly submitted claims are drawn to a materially different method than that originally presented, said method comprising method steps of padding a water soluble protein onto a fibrous substrate and padding a polycarboxylic acid onto the padded fibrous substrate.

Since applicant has received an action on the merits for the originally presented invention, this invention has been constructively elected by original presentation for prosecution on the merits. Accordingly, claims 21-26 are withdrawn from consideration as being directed to a non-elected invention. See 37 CFR 1.142(b) and MPEP § 821.03.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-3 are rejected under 35 U.S.C. 102(b) as being anticipated by Japanese Patent Publication Abstract 09195178 (hereinafter Suzuki).

Art Unit: 1774 .

Suzuki teaches a fibrous substrate comprising core fibers and a protein sheath, wherein the protein sheath is insolubilized by or fixed with a binder. In addition, the abstract teaches that the protein has at least one auxiliary component that can be a metal compound.

Therefore, the abstract anticipates the invention as claimed in present claims 1-3.

Claims 1-3 are rejected under 35 U.S.C. 102(b) as being anticipated by European Patent Publication EP 0 939 160 A1 (Sano).

Sano teaches fibrous substrates treated with a treatment agent comprising a protein and crosslinking agent. Sano further teaches the incorporation of compounds that function as neutralization agents. Therefore, the teachings of Sano anticipate the invention as claimed in present claims 1-3.

Claims 1-3 are rejected under 35 U.S.C. 102(a) as being anticipated by Japanese Patent Publication Abstract 2000212874 (hereinafter Chatani).

Chatani teaches a fibrous substrate comprising core fibers having a functional substance adhered thereto, wherein the functional substance is adhered using a hydrolyzed protein with a crosslinking agent. The functional substance is of the type contemplated by applicants in claims 2 and 3.

Therefore, the teachings of Chatani anticipate the invention as claimed in present claims 1-3.

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11

Art Unit: 1774

F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-3 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-3 of copending Application No. 10/624,095. Although the conflicting claims are not identical, they are not patentably distinct from each other because it would have been obvious to functionalize the protein of the copending application by including a crosslinking agent to increase the adherence of the protein.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

Response to Arguments

Applicant's arguments with respect to claims 1-20 have been considered but are moot in view of the new ground(s) of rejection.

No claims are allowed.
